

38mm Particle Board

Applicable in most premises, the 38mm high-density particle board is one of the most versatile flooring options. Made of fine timber particles bonded together with resin, the board is a secure material capable of holding high point loads. In addition, it is mechanised with tongue and grooves across its perimeter providing a smooth, perfectly fused decking.

This solution is environmentally friendly, using wood from sustainable forests.

Features & Benefits

- ✚ Medium to high point load
- ✚ Optional moisture resistant feature
- ✚ Optional class 0 spread of flame to the underside
- ✚ Optional wear resistance and non-slip surface
- ✚ Cost effective
